

Having fully described my device, I claim:

Claim 1: A stationary pediatric exercise tricycle comprising:

a) a tricycle having a stationary front wheel connected to a frame and a rear axle, said rear axle connected to left and right stationary rear wheels;

b) adjustable handlebars connected to the front portion of said frame;

c) a seat connected to the rear portion of said frame;

d) left and right pedals, rotatably connected to a front wheel axle by respective pedal/axle rods;

e) a motor means connected to said frame and said pedal axle whereby said motor turns said pedals.

Claim 2: A stationary pediatric exercise tricycle as in Claim 1, wherein said handlebars are vertically, and slidably adjustably connected to said frame.

Claim 3: A stationary pediatric exercise tricycle as in Claim 1, wherein said handlebars are horizontally, slidably and adjustably connected to said frame.

5

Claim 4: A stationary pediatric exercise tricycle as in Claim 1, wherein said seat is horizontally, slidably and adjustably connected to said frame.

10

Claim 5: A stationary pediatric exercise tricycle as in Claim 1, further comprising pedal brackets for detachably securing the feet of the user to said pedals.

15

Claim 6: A stationary pediatric exercise tricycle as in Claim 1, wherein said motor means is an electric motor.

20

Claim 7: A stationary pediatric exercise tricycle as in Claim 6, wherein said electric motor is programmable to set the speed and length of time of operation of said motor.

25

Claim 8: A stationary pediatric exercise tricycle as in Claim 1, further comprising a tray attached to the front portion of said frame.
